## Sessions

### 1422 1829 1702 Performance

Performance

[Katina Bitsicas](#)

1422 1829 1702 (<https://youtu.be/dT6BbhtePhI>) is a performative video that explores the memories associated with physical locations from my past, present and future. More specifically, I am utilizing feet (both figuratively and literally) as a unit of measurement to navigate through my grandmother's, my mother's, and then my own home. Every carpet, rug, wood panel, tile and floor covering is meticulously measured, as I pace each inch with my feet. As I walked these homes, the floor plans become permanently ingrained in my memory, inch by inch, solidifying the connection between my family and I, no matter the distance. Each home...

### Behind the Scenes at the Doomsday Supper Club

Performance

Talk

[Jason](#), [E.L. Guerrero](#), [Ananda Gabo](#)

Since the early days of the Great Quarantine, the Doomsday Supper Club has been extending a helping hand to those in need of quality, spontaneous social interaction. Within the walls of our vintage 1990 establishment, we have been able to connect our patrons with one another through the medium of text, click and gasp. Now we would like to open our doors to select members of the Our Networks community, and share what we have discovered along the way.

---

[Marios Isaakidis](#)

biton (<https://bitonproject.org>) is a peer-to-peer network built around swarms — groups of peers that store encrypted files and relay requests through one another. biton swarms interconnect in a global network that provides plausible deniability, meaning that adversaries cannot be sure about who originally made a request. In this way, biton can be used for evading information controls and for building community networks around local data and services.

## Bridge to the Internet: A Community Router

Talk

[Mark Lam](#)

*Bridge to the Internet* is a router image that hosts network bandwidth saving services and robust local area communication applications that activate local area networks to strengthen connection within a local community. With the internet under heavy strain due to the COVID-19 pandemic, it becomes clear that we must maximize our network resources and look for alternatives to internet-based communication.

[Read more](#)

## Building Equity through Public Owned Cable System

Workshop

[Troy Walcott](#)

Our proposal was brought about through forced necessity. After acquiring Time Warner Cable in 2016 Spectrum has shown to be nothing but a bad actor in our cities. Here in NY they have waged war on their union work force as we are the only thing that stands against them gouging the city of our resources for their profit. In 2017 using unfair bargaining tactics they began a campaign to dismantle and take us out. This is when we went on strike.

[Read more](#)

## Building Your Own Routing Protocol

Discussion

Our Networks 2020 has ended! Check out [videos of recorded talks](#).

---

Menu

OSPS!) and there are more routing protocols shooting around the interwebs than you may realize.

But what if you don't want to use the traditional, (big I)nternet? What if your medium of communication is something so new and cutting edge, or so retro and outdated (let's call it vintage) that the commonly used...

## Conscious Networks: Access

Workshop

"Conscious Networks" is a multi-part series of workshops about understanding alternative networking. These include emergent fields of non-physical networking including conscious and unconscious networks. Classes include focusing on Network Understanding, Assessment, Security and Deployment. This is a beginner friendly workshop series and open to those of all skill levels.

## Conscious Networks: Action

Workshop

"Conscious Networks" is a multi-part series of workshops about understanding alternative networking. These include emergent fields of non-physical networking including conscious and unconscious networks. Classes include focusing on Network Understanding, Assessment, Security and Deployment. This is a beginner friendly workshop series and open to those of all skill levels.

## Conscious Networks: Agency

Workshop

## Crafting Commons: A round table on cybercraft networks

Round table

[Afroditi Psarra](#), [Gabrielle Benabdallah](#), [Heidi Biggs](#), [Shih Wei Chieh](#), [Audrey Briot](#), [Amor Muñoz](#), [Constanza Piña](#), [Melissa Aguilar](#)

Craft practices rely on the exchange and transmission of techniques, technical skills, tacit and explicit knowledge about materials and methods but also on the circulation of common values and ethos, fostering shared mindsets and communities. Many of these communities around the world are developing and passing on these technical and cultural legacies to fellow practitioners, creating cultural and intellectual commons in the same movement, by organizing autonomous conferences, camps, short residency programs, and working collaboratively bringing local and international networks together. This session proposes to bring several of these practitioners together to discuss what their practices create beyond artifacts, and...

## Eigengrau

Exhibit

Talk

[Craig Fahner](#)

*Eigengrau* (a term used to describe what is seen through closed eyes) is a web-based artwork that facilitates a sense of connection with others while resisting the rapid cognitive pace demanded by dominant social media platforms. It is a platform that can only be interacted with when users close their eyes. Using socket.io and p5js, an in-browser facial feature tracker detects when a participant's eyes are closed, at which point, an audible tone is generated. When multiple users visit the site and close their eyes simultaneously, harmonized tones are produced for each user and broadcast across the network, resulting in...

## Epistemic relation as social relation

Talk

[Neal Thomas](#)

This talk begins from the premise that today's social computing environments—their interfaces, data structures, and overall designs—have been enormously, if latently, influenced by philosophy. Machine learning strategies for computer vision and automatic classification owe a conceptual debt to Humean empiricism, for example. Embodied interaction design is deeply indebted to the insights of Heideggerian phenomenology. And the ideas of American pragmatist and logician Charles Sanders Peirce serve as an important formalizing basis for networked data structures.

Our Networks 2020 has ended! Check out [videos of recorded talks](#).

Menu

[Mai Ishikawa Sutton](#), [Udit Vira](#), [Benedict Lau](#)

This collaborative workshop prompts discussion around precarious and hidden labour in digital authorship and in open publishing. Through conversations and drawings, we will explore tensions between social purpose vs. free labour, and our [atomization in a competitive content market](#) as creators. Inspired by [Holistic Security](#) by [Tactical Tech](#) and the [Revolutionary Networked Politics](#) presentations [at transmediale](#), we will engage through a holistic approach that centres on self-care and the well-being of content authors. There are many topics relevant to digital publishing, such as: equitable compensations and dignified livelihoods, creative expression on moderated platforms, security and anonymity in online spaces. How...

[Read more](#)

## hyperobjects.io

Workshop

[Judith Sönnicken](#), [Qusai Jouda](#)

To call something a hyperobject means to look at it with new eyes, to reclaim its inherent mystery. Hyperobjects are comparable to hashtags, implying metadata of time and space. [hyperobjects.io](#) is a digital performance template for interspecies relationship. Participants can geo-tag artworks or stories on an interactive, borderless map. Likes, shares and purchases create funds for international micro-scale environmental projects through a blockchain script.

## Internet Aerobics

Performance

[Liat Berdugo](#)

Filmed in a computer Lab, Internet Aerobics is a 20-minute aerobics workout routine about the internet, streaming to you through the internet. Aerobics props of long, blue ethernet cables are used, and hyperlink blue is celebrated as the color of online opportunity – of links that have not yet been clicked. Aerobics moves embody multiple facets of online life, with packets of information speeding through wifi networks, routers, data centers, fiber optic cables – often times at different speeds due to the lack of net neutrality laws. This workout routine is an invitation to you to sweat along in front...

## Performance

[Audrey Briot](#), [Afroditi Psarra](#)

Listening Space is an artistic research that explores transmission ecologies as a means of perceiving the surrounding environment beyond our human abilities. Conceptually the project seeks to define transmissions ecologies as raw material for artistic expression, to understand and re-imagine in poetic means, representations of audio and images broadcasted from space. The artists are creating cyber physical systems for sensing the invisible universe that surrounds us. By using open-source tools, DIY electronics, hardware hacking and digital crafts, they aim to approach art and science and create artifacts that explore the idea of citizen science. Specifically, by focusing on electromagnetic-field (EMF)...

## Meme Tactics

Curator's tour

Talk

[China Residencies](#)

The China Residencies team proposes a walkthrough of Meme Tactics, an online exhibit in Mozilla Hubs featuring artists Elyla Sinvergüenza and Amy Suo Wu. Their creative interventions in the public sphere will launch us into a strategizing session to harness the humorous power of memes for movements. We'll share examples of dances, symbols, zines and patches from Nicaragua, India, mainland China, and beyond. You'll leave with a set of tactics specific to amplify your own messages, inspired by the way in which social movements around the world are using memes to negotiate power and assert presence.

## Open Data and Collaboration in Action

Workshop

[Cassandra Could van Praag](#), [Sara El-Gebali](#), [Allan Ochoła](#)

As we enter the final decade of the 2030 Agenda for Sustainable Development, we have an opportunity to accelerate our progress towards this goal, by more rigorously collecting, analyzing and applying good-quality data to shape programmes that can bring us closer to ending access to digital divide in all its forms. Open data is a critical enabler. The session will bring together the open data community to learn, share, plan and collaborate on the future of open data in the context of COVID-19. The unique nature of the event is to enable participants from various interdisciplinary backgrounds to define strategies...

## p2p Experimental Chatroom

Talk

Study group

[Xin Xin](#)

How might we begin to exit established forms of social media and the infrastructure of surveillance? p2p Experimental Chatroom is a weekly study group that researches the nonlinear histories of micro-social-networks and uses p5.js and peer.js to build a text-based chatroom from scratch. For three weeks, we will explore playful and experimental ways of communicating with each another over the peer to peer network. As a means to think beyond the standardized social media of the Web 2.0, we will work on customizing our own chatroom interfaces by integrating features such as collaborative drawing and simple animations. In this current...

## The Study: a literary mesh

Workshop

Talk

[Edith Viau](#)

The goal of this creative workshop is to build a literary mesh collectively, exploring the mesh as a kind of narrative structure. A literary mesh is loosely inspired by the network mesh. As we envision it, a literary mesh means that there is not one way to approach the literary work: we could begin with the end, if there was one. It is a way of playing with the structure holding the written words together, of creating a new scaffold for stories yet to be told. In this workshop, we will be using GitHub to collaborate online in the creation...

## Troy Walcott

Troy Walcott, born and raised in Brooklyn NY and a 20 year veteran of the cable industry. Joining the company when it was Time Warner Cable and continuing when it became Spectrum Cable. Working with the cable company also gave me the opportunity to become a member of the International Brotherhood of Electrical workers, the union that represents the field technical staff that makes up the cable company. I am a shop steward for that union. Up until going on strike my last position held in the company was with survey and design. In a short explanation we were responsible for bringing cable service to the areas of the city who did not have it.

## Udit Vira

Udit Vira is an engineer and designer living in Toronto. He is broadly interested in building a capacity for long term thinking; new modes of collaboration; and examining the potential for technology to sense and actuate change. He is currently a member-owner of Hypha Worker Co-operative, strategist at Toronto-based studio From Later, and team member of the Distributed Press project. Udit has a background in Electrical Engineering and Physics, and he graduated from McGill University where he was a member of the Nano-electronic Devices and Materials research group.

## Ulrich Gehmann

Based in Karlsruhe/Germany; Ulrich Gehmann is one of the founding members of Ideal Spaces Working Group, established 2015, which deals with conceptions and necessities of human space. His background is in humanist education, biology, anthropology and business administration. After his professional career in management and consultancy he studied History at University of Karlsruhe (KIT). During his studies at KIT, he founded the journal New Frontiers in Spatial Concepts, and led a 5 year-seminar on Social Formatting, together with Rolf-Ulrich Kunze. He currently researches and publishes on occidental mythology, ideal spaces and gestalt issues, and their impact on recent sociocultural reality.

WMAN is a playing, research and artistic practice group based on the medium of video games and is made up of 6 artists. Its working, demonstration and research mechanisms vary at each occurrence depending on the fields covered. WMAN is mobile. It takes place both in the physical spaces that bring its members together and in the digital spaces in which they navigate. What it produces is as diverse as what it explores : it builds reflections as much as plastic forms such as performance, sculpture, image or text.
